

Use SIP Trunk / VoIP Phone Service

How to config OnSIP for Ecsow Dialer / Voice Broadcast

Please login your onsip account, then click the "Administrators" tab > "Users" button, click the user to show the user information details as the below image shows.

The screenshot displays the OnSIP web interface. In the top right corner, the "Administrators" tab is highlighted with a red box and the number "1". On the left sidebar, the "Users" menu item is highlighted with a red box and the number "2". The main content area shows the user profile for "BoZhi" (extension x7001, status 2 online). The "PHONE SETTINGS" tab is selected and highlighted with a red box and the number "3". A modal window titled "Options" is open, showing configuration for "SIP Registrations (2)". The modal has several tabs: "General", "SIP Account", "Do-Not-Call", "Voice Activity Detection", "Call Distribution", "Call Transfer", and "Preset". The "General" tab is active, showing fields for "Display Name" (bozhi@eurotech.onsip.com), "SIP ID/User Name" (bozhi), "Domain" (eurotech.onsip.com), "Authorization User" (eurotech), and "Password" (masked with dots). Below these are sections for "Outbound Proxy" (radio buttons for Domain and Proxy, with Proxy selected and value sip.onsip.com) and "Concurrent Calls" (Number of concurrent calls set to 1). A note states: "* SIP service must support multiple channels if you want to run concurrent calls". At the bottom of the modal are "OK" and "Cancel" buttons. The background shows the user's SIP address (bozhi@eurotech.onsip.com), SIP Password (8htidymb4Ums...), Auth username (eurotech), Username (bozhi), Outbound Proxy (sip.onsip.com), and Domain (eurotech.onsip.com). Colored lines connect these fields to the corresponding fields in the modal: a red line from SIP Password to Password, a blue line from Auth username to Authorization User, an orange line from Username to SIP ID/User Name, and a purple line from Outbound Proxy to the Proxy radio button.
