

# Import and Export List

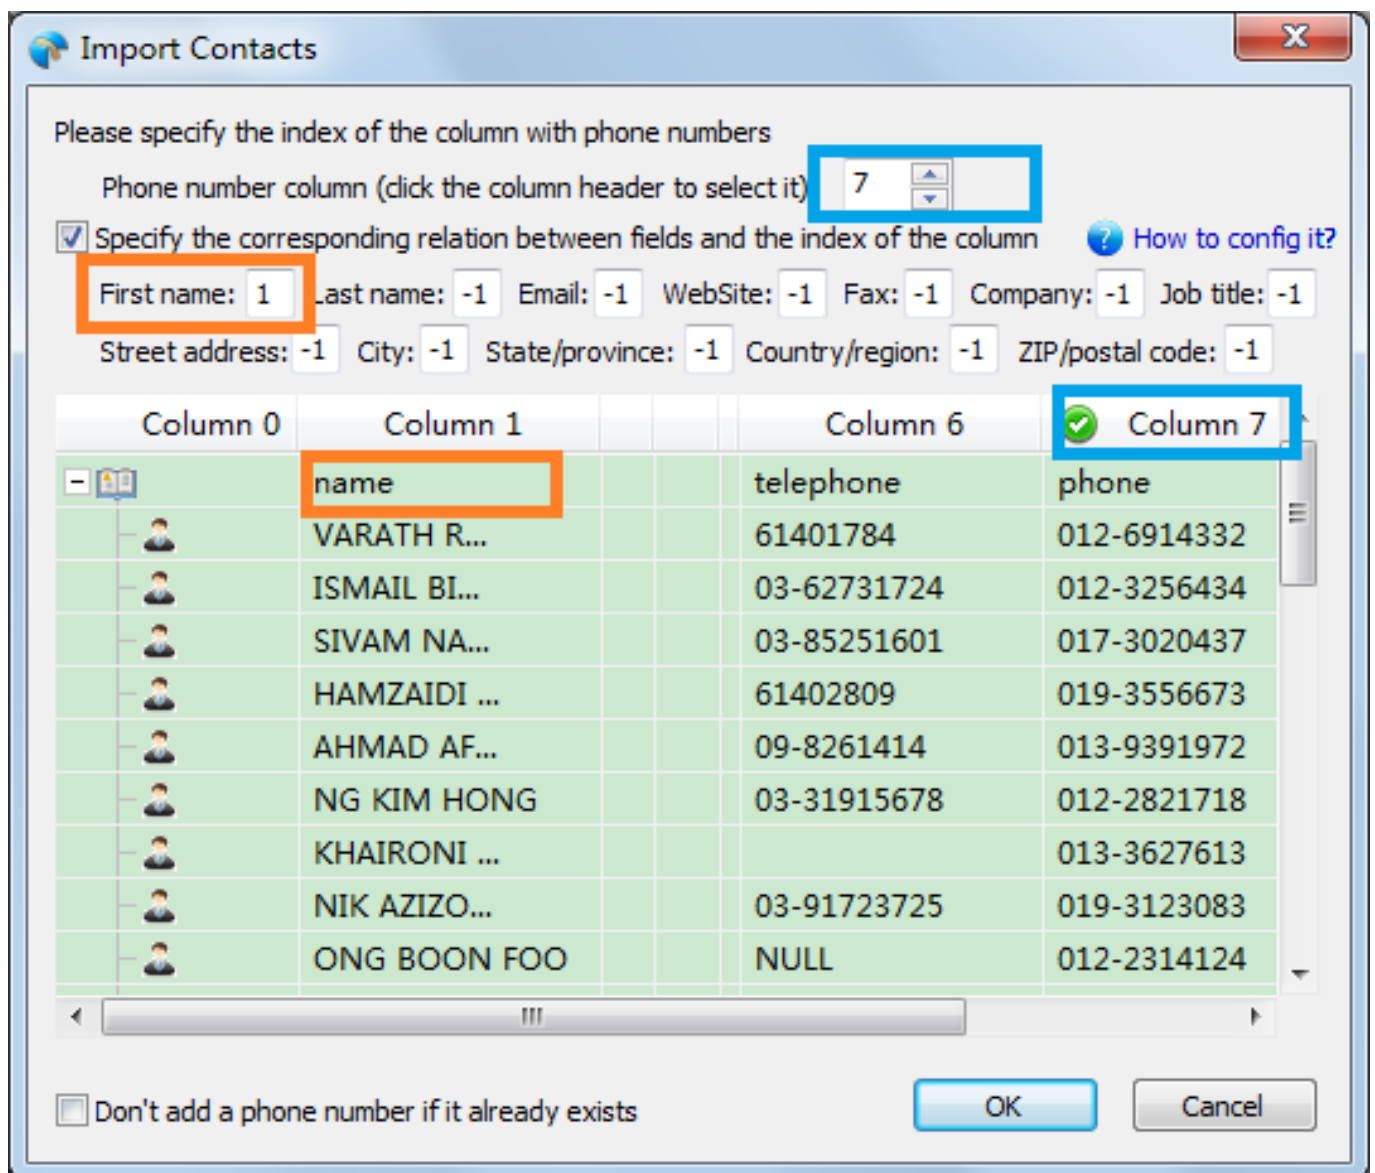

## Importing from a CSV file

Before you import a call list, you will need a .csv file. If you don't know how to create the CSV (Comma delimited) file, please see [How to export Excel data to CSV files in Excel?](#)

- 1, Open Auto Dialer.
- 2, Click the menu Import > Import CSV file

- 3, You will need to specify which of your columns from your call list will be placed on Predictive Dialer's "Name" and "Phone Number" columns.

A screenshot of the 'Import Contacts' dialog box. The title bar says 'Import Contacts'. The main text says 'Please specify the index of the column with phone numbers'. There is a text box for 'Phone number column (click the column header to select it)' with the value '7'. Below this, there is a checked checkbox 'Specify the corresponding relation between fields and the index of the column' and a link 'How to config it?'. Below the checkbox, there are several text boxes for field names and their corresponding column indices: 'First name: 1', 'Last name: -1', 'Email: -1', 'WebSite: -1', 'Fax: -1', 'Company: -1', 'Job title: -1', 'Street address: -1', 'City: -1', 'State/province: -1', 'Country/region: -1', and 'ZIP/postal code: -1'. Below this, there is a table with columns 'Column 0', 'Column 1', 'Column 6', and 'Column 7'. The 'Column 1' header is highlighted in orange, and the 'Column 7' header is highlighted in blue with a green checkmark. The table contains data for 'name', 'telephone', and 'phone'. The 'name' column has values like 'VARATH R...', 'ISMAIL BI...', etc. The 'telephone' column has values like '61401784', '03-62731724', etc. The 'phone' column has values like '012-6914332', '012-3256434', etc. At the bottom, there is a checkbox 'Don't add a phone number if it already exists' and 'OK' and 'Cancel' buttons.
